

It's really not necessary that you spend your entire Email life captives of Google, Hot Mail, Yahoo or some other commercial enterprise. You need not forever have all your data hung up somewhere in the clouds for others to use.

There are other private Email programs available such as the one we use “Thunderbird”. They are easy to install and offer advantages not found in the “Captors” programs. Using a private Email system all your information and correspondence is stored on your own computer.

If you'd like to investigate “[Thunderbird](#)”, in which we have no part or interest in please free to [Download here](#). If you have available either “Outlook” or a private Email system you can use any of our Christian domains, or one of your own making, to establish your own Christian identity Email address.

[Setting up your Christian Email Identity is simple.](#)

Using “Thunderbird” or any third party email client you need to enter a User ID (Full email address) Password as a POP 3 service in the email properties. Using no security and simple password. This will differ according to your email client service provider. Incoming port 110 and outgoing port 587 this will also differ according to your provider. Contact your ISP (Internet service provider) for this information. If you need setup instructions visit your ISP support page at: [ISP\\_Setup\\_Help](#) for assistance in setting up your new Christian Identity email address.
